

SoloTruth ARM Platform

Continuous physical evidence for everything your business owns.

The Problem Every Asset-Heavy Business Has

Your financial systems track what you own in a financial system. But financial systems and physical reality drift apart every day. Assets move, get replaced, or disappear. No one updates the records until the annual audit. By then, the damage is done - inflated tax bills, insurance premiums on equipment that no longer exists, audit findings, and systems migrations built on bad data.

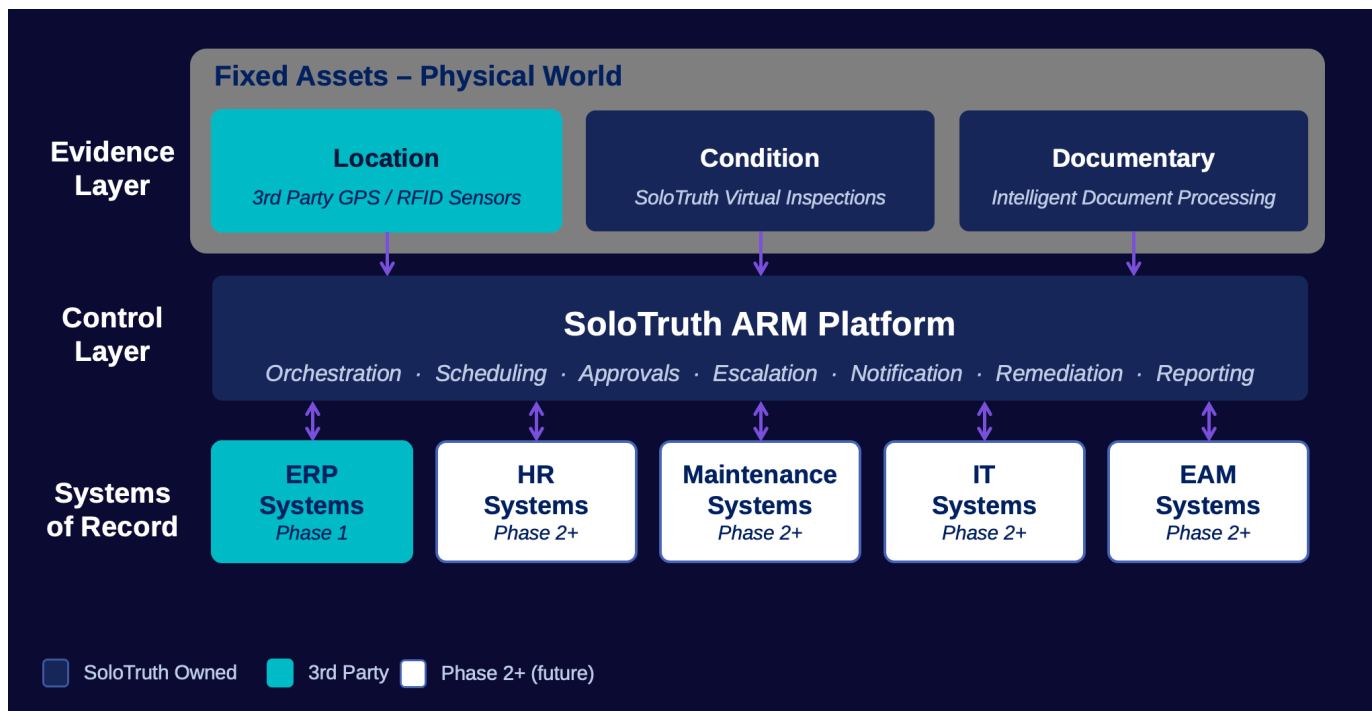

The average organization has 10–30% of its asset records wrong. Most don't find out until it's too late.

THE SOLUTION

SoloTruth ARM (Asset Relationship Management) is a continuous verification platform that connects the physical world to your financial records — automatically, every day, not once a year.

Think of ARM as the bridge between where your assets actually are and what your systems say about them. Three streams of evidence feed in continuously:

- Location — real-time GPS and RFID data confirms where each asset is, right now.
- Condition — mobile virtual inspections capture verified photos and video of asset state.
- Documentary — intelligent document processing reads work orders, maintenance logs, and invoices to automatically update records.

HOW IT WORKS

<p> Continuous Orchestration</p> <p>ARM schedules, assigns, and tracks every inspection and verification task across your asset base — no manual coordination required.</p>	<p> Smart Escalation and Alerts</p> <p>When a discrepancy is detected — a missing asset, a condition change, a document mismatch — ARM automatically escalates to the right person and tracks resolution.</p>
<p> Approvals and Remediation</p> <p>Every finding goes through a configurable approval workflow. Issues are documented, assigned, and resolved with a full audit trail.</p>	<p> Reporting That Stands Up to Scrutiny</p> <p>Real-time dashboards and audit-grade reports give finance, operations, and compliance teams a single version of the truth — ready for auditors, lenders, and regulators.</p>
<p> Connects to Systems You Already Use</p> <p>ARM integrates bidirectionally with ERP platforms (SAP, Oracle, Dynamics) in Phase 1, with HR, Maintenance, IT, and EAM systems following in Phase 2.</p>	<p> Built on VirtuSpect</p> <p>ARM extends SoloTruth's proven VirtuSpect inspection platform — already delivering verified virtual inspections across industries — into a full asset lifecycle management layer.</p>

PROVEN IN THE FIELD

<p>Celtic Bank — Financial Services</p> <p>Celtic Bank needed to perform over 1,000 asset and site inspections across multiple locations. Manual inspection cycles took 5 days on average. With SoloTruth VirtuSpect, the same process now takes less than a day — a 5x improvement in turnaround — while producing verified, audit-grade evidence for every asset.</p>
--

WHY THIS MATTERS NOW

Three forces are making fixed asset accuracy a business priority right now — not next year:

<p>Audit Scrutiny</p> <p>Auditors are failing asset verification tests at rising rates. Organizations that can't prove their records are accurate face increasing audit risk and higher fees.</p>	<p>Sustainability Reporting</p> <p>New global sustainability rules require companies to report asset locations and environmental impact at a level of detail that ERP systems simply can't provide.</p>	<p>System Upgrades</p> <p>Tens of thousands of organizations are migrating to new ERP platforms. Bad asset data is the most common reason migrations run over budget. ARM cleans the data before go-live.</p>
